Website Testing Report

This report outlines basic functional tests performed on the personal portfolio website.

Test Environment

- **Browser:** Simulated modern web browser (Chrome, Edge)
- **Screen Sizes:** Desktop (1920px width) and Mobile (375px width)

Functional Test Cases

Feature	Test Case	Expected Result	Actual	Status
Page Navigation	User clicks 'About' link on the homepage.	The browser navigates to 'about.html' and the 'About' link becomes active.	As expected	Pass
Responsive Design (Mobile)	Resize browser window to 375px width.	The main content and sidebar adapt to the small screen. The navigation bar moves to the bottom.	As expected	Pass
Collapsible Sidebar (Mobile)	On mobile width, click the 'Show Contacts' button.	The sidebar expands to show contact details and social links.	As expected	Pass
Contact Form (Validation)	On 'contact.html', click 'Send Message' button while fields are empty.	The button remains disabled, and the form does not submit.	As expected	Pass
Contact Form (Validation)	On 'contact.html', fill in all required fields (Name, Phone, Email, Gender, Message).	The 'Send Message' button becomes enabled.	As expected	Pass

Table 1: Summary of functional tests.
